CURSORY REMARKS.

The fruit trees in this catalogue are either grafted or inoculated, and are propagated from such European and American kinds as have acquired a well merited celebrity, the whole collection of which has recently gone through a most careful revision, and the selections have been made with great care and attention. Every precaution is taken which is necessary to preserve the different varieties completely distinct, and all the peach and other trees are perfectly healthy, and free from disease. Many persons, however, are apt to purchase trees without regard to any point but their cheapness, and not unfrequently, after the toil and expense of years, find them, when they arrive at bearing, absolutely worthless. The strongest proofs the proprietors can give the public of their anxiety to guard against misconception, are the *exact descriptions* contained in the treatises recently published, and other works of a similar character in which they are now engaged; the result of which will be, that any person, however ignorant on the subject, cannot fail to know if he has been deceived.

Specimen trees of every variety of fruit comprised in this catalogue, are now standing in the experimental orchards of the establishment, and all the kinds are ready for sale. The stocks of the newest sorts, however, are limited, and the trees, in consequence of their recent introduction, are of less size. The new varieties introduced this spring, (1831) will be announced in a supplement catalogue.

A large number of the apples and pears are the same as described by Mr. Coxe, and the Pomological Manual contains descriptions of a great number of other varieties.

It seems almost superfluous to remark, that the trees and plants in this catalogue not particularly designated as tender, are hardy.

Every tree, when sent from the garden, is duly labelled; and from fifteen to thirty trees are usually packed in each matted bundle.

Where trees are requested for exportation, they are carefully packed in mats, casks, or boxes, so as to be sent to Europe, the West Indies, or any part of America, with perfect safety.

All packages of trees are delivered at Fulton-market wharf, New-York, by water, *free of freight;* and, when particularly desired by persons at a distance, they will be shipped to any port they may designate: and agreements have been made with the lines of packets to Boston, Baltimore, Washington, Richmond, Charleston, and Savannah, to take bundles of trees at very moderate freights; and if desired to be transmitted to Philadelphia, they can be sent there by the Transportation Line in one day, and the canals now forming in every section of our country, present cheap and easy modes of conveyance. No care is wanting on the part of the proprietors to give such directions as may cause them to arrive safely; but it is to be expressly understood, that after being thus delivered or shipped at New-York, they are wholly at the risk of the person who orders them.

To such persons as desire fruit trees, &c. and are not themselves acquainted with the qualities of the different kinds, it is recommended that they specify in their orders the number of trees wanted of each species of fruit, and leave the selection to the proprietors, who will make it according to the views and tastes of applicants; and in such cases they may rely that only those will be sent which are of the most approved kinds, and when desired, those that will ripen in succession; and larger trees can generally be selected in such cases.

It is also well, where the orders are small, to unite those of several neighbours in one, which will both abridge the trouble of execution and the expense of packing and transportation; and as each tree is labelled, it can cause no confusion.

Persons who may wish to make selections of fruits of *American* origin, will find them particularly designated. It sometimes occurs that the demands for particular kinds of fruit trees are so much greater than anticipated, that it renders them for the moment comparatively scarce, except those of small size. In such cases, in order to prevent any delay, it would be well that the orders should authorize, that such kinds may be replaced by others of equal quality, which trust will be executed in a manner worthy of the confidence reposed.

American Indigenous Trees, Shrubs, and Plants, or their seeds, suitable for sending to Europe, will be supplied in assortments from five to one thousand dollars or more, as enumerated in the catalogue No. 4.

The proper seasons for the transplanting trees, are the months of October, November, and December, in autumn; and March and April, in the spring. For bulbous flower roots, the best season is from July to October inclusive. Greenhouse plants can be forwarded with safety at any season, except the winter months, and even then, if the conveyance is wholly by water.

In addition to these, Scions of Fruit Trees, Grape Vines, &c. can be transmitted from October to April. Many persons are prevented from ordering trees, from a supposition that they will not bear distant transportation, an idea so extremely erroneous, that it ought to be exploded; the proprietors are in the constant habit of sending trees, and even the most delicate plants, to the remotest parts of the Union with success; and they annually transmit large quantities to the different cities of Europe, where in some cases they have from 300 to 500 miles land carriage, after crossing the Atlantic. The success which attends these expeditions is an ample proof of the superior manner in which the articles are packed for their respective voyages; and persons sending orders, need only state the extent of land and water carriage, and the articles will be packed accordingly.

Catalogues may be obtained *gratis* of either of the agents, or by direct application to us; and orders left with them, or forwarded (post-paid) to the proprietors, will meet attention; but it is expected that persons, with whom no acquaintance exists, will, in forwarding orders otherwise than through an agent, designate some person in New-York who will be responsible for the payment, or tender a suitable reference. It is requested that those who, in sending orders, mention only the numbers by which the trees, &c. are enumerated in the catalogue, should be particular to state the *edition* from which they make their selections, as there are some numerical variations in the different editions.

The postage of a letter is a trifling thing, but to one who receives a great number, it becomes burdensome; persons are therefore desired to send their letters post-paid.

As many persons in the Union act as agents for different nursery establishments, it is particularly requested, that where orders are intended for us, it be plainly specified: and every invoice hereafter will have *a printed heading, and our signature, to prove that it is genuine.* We mention these cautions *for good and conclusive reasons, knowing we have been injured by deceptions.* And we therefore wish that in every case the above proof be insisted on, *for the proprietors take upon themselves no guarantee, unless such an invoice from them can be produced.*

N. B. It is expected that no persons having similar establishments will copy the different remarks attached to this catalogue, without crediting the source; as it would be extremely unreasonable that other persons should take upon themselves the responsibility for any errors which may have been inadvertently advanced by the authors of this publication.

W. PRINCE & SONS.

PRICES OF TREES, &c.

The prices have been greatly reduced for a large number of articles; in many cases 25, 33, and even 50 per cent. below former rates, and the average prices throughout the catalogue will be found as low or lower than the same articles, *equally genuine and of equal quality,* as can be obtained elsewhere.

N. B. Where ornamental trees of very large size are wanted for streets, avenues, &c. or where fruit trees are wanted of extra large size, they will be charged in proportion.

APPLES. *Pommiers. Pyrus malus.*

25 to 37½ cents each; $20 to $25 per 100, according to the kind and quality.

GRAPES. *Vignes. Vitis vinifera.*

Those marked thus * 37½ cents each.
† 50 cents each.
‡ 75 cents each.
Those not marked are 1 dollar each.

T denotes celebrated table grapes.
W ——— celebrated wine grapes.
L ——— those from the garden of the Luxembourg.

The above prices are for single plants, or where a few vines only are wanted. Those who wish to establish vineyards, and consequently desire a great number, will be supplied at a great reduction from these prices.

For descriptions of the respective varieties, and directions for their culture, see "Prince's Treatise on the Vine."

In order that persons establishing vineyards may make their selections judiciously, and with a proper regard to latitude and locality, we have attached to a great number of varieties the name of the particular department of France where each originated; therefore, by turning to the map, the latitude will be ascertained. The synonymes are carefully arranged, and in no case is the same fruit *knowingly* twice enumerated in this list, and where a doubt exists, it is so stated.

German and Swiss grapes.

These are principally celebrated wine grapes; and I have information from the highest sources, that those numbered 119, 133, 134, 137, 138, 139, 144, and 145, are considered among the most valuable for vineyards, on account of their abundant and regular crops, and their resisting the severest winters uninjured. In addition to these here enumerated, a number of varieties of grapes are cultivated in Germany which are necessarily arranged under other heads in this catalogue, including the principal part of the Burgundy grapes; and I am assured by a gentleman who has a very extensive vineyard on the Rhine, that the grapes numbered 1, 7, 93, 94, 95, 98, 100, 104, and 105, support there all the rigours of the climate, and produce immense and regular crops.

The following grapes being less known, and the most of them being in no other collection in our country, I have placed them under distinct divisions as to colour and form; the name of the Department of France where each originated being in Italics. Those marked T are particularly celebrated for the table; the others, although cultivated for wine in France, are many of them fine table fruits also.

The Departments which compose the districts of Burgundy, Champagne, and other celebrated wine districts of France, can be seen by reference to the map, and the names of the Departments being attached to the foregoing list of grapes, it will easily be perceived which kinds are used for the wines of the respective localities.

American native grapes.

All the following are genuine American species and varieties, except No. 394, which is a native variety of a foreign species, and Nos. 408, 421, and 441, deemed dubious.

FIGS. *Figuiers. Ficus carica.*

The culture of this delicious fruit having recently become an object of particular attention, and requiring no more care to covering in winter than the delicate kinds of grapes, the greatest pains have been taken to extend the collection by importations of the choicest kinds from the south of France, Italy, and elsewhere; and it now forms a concentration of this fruit unrivalled in extent and excellence.

ORANGES, LEMONS, CITRONS, SHADDOCKS, AND LIMES.

These require sufficient protection in winter to keep them from freezing in the states north of South Carolina: in the latter state, and those south of it, they do not require it. In Italy, extensive nurseries of these fruits are cultivated, some of which contain 200 varieties. A work has recently been published at Paris, edited by Messrs. Risso and Poiteau, which contains engravings and descriptions of 160 varieties, comprising the most valuable and interesting. It is from an inspection of those figured in this work that the new varieties have been selected which are here enumerated; to obtain which has been attended with great difficulties, as the collections of Paris and London possess but few of them.

Those marked thus *, if of 1 year's growth from inoculation, $2
2 do. do. do. 3
3 do. do. of age for bearing 3 50

Those marked thus ‡ are $3 50 each. Some of these kinds are of three, and others but one and two years, growth.

Those marked thus † will be each $5, and being quite new, are not at present large.

ROSES. *Rosiers. Rosa.*

This favourite flower has been cultivated to such an extent in Europe, that it combines almost every tint of which nature is susceptible, and some of their collections contain above 1400 superb varieties. The following have been selected on account of their fragrance, size, beauty, singularity, or delicacy, and the original plants of many of these kinds cost from $1 50 cents to $4 75 cents each, exclusive of the expenses and losses attending importation. The collection *occupies an acre of ground*, where all the kinds are marked with their respective names, and during the period of their bloom they present an accumulation of varied beauties scarcely to be rivalled, and those who may desire it, can make their selections when in flower. The various kinds of roses present, also, a great diversity in respect to size as well as in other points, some being naturally of very tall stature, others of medium height, and others quite diminutive. All the following Roses will endure the winters of any part of the Union without protection, except No. 74, which in the northern states requires to be covered with straw, &c. during winter. The culture of Roses is of the most simple and easy description, and information on that point will be found in the *Treatise* recently published. The different kinds of Roses have been critically examined when in flower, and the remarks as to their qualities is the result of the personal observation of the proprietor.

These Roses are almost wholly on their *own bottoms*, a few of the most rare kinds only being inoculated.

Those marked thus * are 25 cents each.

CHINA ROSES.

Most of which are monthly, or everblooming.

The monthly varieties, when planted in the open ground, are particularly interesting, on account of expanding their flowers in March and April, when those of other kinds have not yet made their appearance. They continue to bloom throughout the summer; but in the autumnal months their numerous flowers also afford particular gratification, as nature then seems most to need their cheering influence. Nearly the whole number support our winters with little or no protection, as designated by this mark †; those most tender need only to have a box or barrel placed over them during winter.

PÆONIES. *Piviones.*

No class of flowers has recently attracted more attention in Europe than this, a monograph of which has lately been published in London. Most of the varieties are extremely splendid, and others possess striking peculiarities. Anticipating that a similar taste would be evinced in this country, the proprietor has, by great exertion, obtained every variety possible.

CARNATIONS. *Oiellets doubles. Dianthus caryophyllus.*

This most interesting class of flowers, which so deservedly commands universal admiration, has received particular attention; and the entire collection now comprises about 200 superb varieties—the most of which have been considerably increased, and the others are in a course of propagation. It may be well to remark, that sometimes a branch, or even a whole plant, may vary the colour of its flowers; but this is not very frequently the case.

CHINESE CHRYSANTHEMUMS.

Chrysanthemum sinense.

This superb flower (often denominated Artimesia) is deservedly esteemed; being perfectly hardy, and affording a most brilliant display, at a time when the chilling blasts of autumn have left us but the vestiges of departed verdure. It is therefore a subject of much gratification that the number obtained from China exceeds 50 varieties, nearly the whole of which are offered to the public in this catalogue.

The following are 50 cents each.

IRIS, *or Fleur de Louis.*

This flower, from its great combination of colours, (whence it derives its title) and altogether unique appearance, has ever found admirers among the curious and the scientific. It is also the court flower, or emblem of the Bourbons. In addition to these here enumerated, there are about 30 beautiful bulbous varieties, for which see catalogue of bulbous flowers.

DAHLIAS

At the following reduced prices.

The whole assortment comprises above 100 kinds of the very finest that could be procured in Europe and Mexico; for the names of which see Green-house Catalogue.

Superb double varieties, each 75 cents.
Double varieties of kinds less rare, each 50 cents.
A few very superior new kinds, each 1 dollar and upwards.
Fine assorted kinds, per dozen, 6 dollars.
Common do. do. per dozen, 4½ dollars.
Some very superior new kinds, per dozen, 10 dollars.

CAMELLIA JAPONICA, *or Japan Rose.*

The collection of Camellias comprises all the newest varieties, most of which are very remarkable for their splendour. The prices are now greatly reduced, in consequence of the plants being much increased. Owing to the universal admiration which this plant has received, and its requiring so little care, and enduring without injury a great degree of cold, the demand has been unexampled. The proprietor has at all times very large quantities to supply wholesale orders, on which a liberal discount will be made, and his present collection exceeds 3000 plants, which he is rapidly increasing.

For a complete list of the different varieties, with the low price at which they are now offered, see Green-house Catalogue, No. 3.

CONCLUSION.

Strangers who may wish to visit the Garden at the periods at which particular flowers may be seen in perfection, are informed, that the Hyacinths are in their greatest beauty from the 1st to the 25th of April—Tulips from the 1st to the 18th of May—Roses from the 1st to the 15th of June—Pæonies from the 10th to the 30th of May—Carnation Pinks from the 1st to the 15th of July—Dahlias from September to October: but among such a multitude of Plants from every region, there is at all times a great variety in flower, which are calculated to interest both the botanist and the amateur.
